TECHNICAL BULLETIN — July 2014

369. Annual Inspection of Trailer Mounted Amusement Devices

Controllers and Inspection Bodies are reminded that a trailer chassis, on to which a ride may have been mounted, or a purpose made ride that incorporates a “trailer” and thereby allows it to be moved from location to location, requires those elements pertaining to its structural and mechanical integrity, necessary for the correct operation or assembly of the ride, to be included in the Annual Inspection. These elements may include either all or part of the chassis, stabilisers and out riggers.
